

HR Analytics Summary Report

Project Overview

This project focused on analyzing employee attrition trends to identify the key factors influencing employees leaving the company. The analysis was performed using Excel, MySQL, and Tableau to clean data, answer business questions, and create an interactive dashboard for visualization.

Tools & Technologies Used

- Excel – Data cleaning, duplicate checking, and handling null values
- MySQL – Business query analysis and insight generation
- Tableau – Interactive dashboard creation and visualization

Key Findings

- Out of 311 employees, 104 employees left the company, indicating a high attrition rate.
- Production and IT/IS departments showed the highest attrition levels, suggesting workload or management-related issues.
- Employees who left the company had lower average salaries compared to employees who stayed.
- Mid-performing employees experienced the highest attrition rate, possibly due to lack of growth opportunities.
- Employees generally left the company after approximately 3.5 years.
- Female employees showed a slightly higher attrition rate compared to male employees.
- Major reasons for attrition included better opportunities, dissatisfaction, and higher salary expectations.

Recommendations

- Improve salary structures and compensation strategies to reduce salary-based attrition.
- Provide better career growth opportunities and internal promotion programs.
- Focus on employee engagement and recognition initiatives.
- Conduct department-level analysis for Production and IT/IS teams to identify operational issues.
- Introduce mentorship and retention programs for employees with 3–4 years of tenure.
- Improve employee wellness and work-life balance initiatives.

Conclusion

The analysis identified multiple factors contributing to employee attrition, including salary, department, performance level, and career growth opportunities. The interactive Tableau dashboard helped visualize trends clearly and supported data-driven decision-making. By implementing the recommended strategies, the company can improve employee retention, reduce attrition, and build a more stable workforce.
